

## PREVIEW RBM MORE: MORE PAD INVISIBLE KIT

RBM MORE intends to define new standards for well-being thanks to innovative solutions which make it possible to design and create living and work spaces, public or private, inspired by a new concept: climatic well-being.

Climatic well-being means feeling well where we live and work. A simple concept, but a result that is difficult to obtain. For this reason, RBM MORE has created a range of integrated systems that make it possible to manage, control and optimize the three variables, indicators of well-being in given environments:

- temperature
- humidity
- air quality

RBM MORE systems adapt to people's habits, needs and necessities, improving their quality of life: everything is connected, controllable and integrated, minimizing the amount of time required by environmental conditions to adapt to new needs or to altered external conditions.

To manage the temperature, RBM MORE solutions are inspired by a very simple principle: imitating nature. To maximise climatic well-being in an architectural space, the RBM MORE systems rely on innovative, heterogeneous radiating elements, to be used in various applications, both to heat and cool the environment, taking advantage of natural convective motion, avoiding forced air circulation when not functional to a quick recovery of conditions of well-being.

For the 2022 FuoriSalone, RBM MORE presents "PAD INVISIBLE KIT": a pre-assembled kit for supplementary heating of parts of walls.

MORE PAD is a low-voltage technopolymer radiant pad, both for indoors and outdoors, able to self-limit its own maximum temperature. Wall, floor or ceiling installation or even integrated with furnishings, it remains hidden from sight.

PAD INVISIBLE KIT and RE-KIT use the PAD Outdoor as a heating element, it is supplied specifically in 230 V strips measuring 1500 mm, each one is sewn on a flexible support and individually cabled: a reaction is triggered by a molecular vibration of the nanoparticles that generates the progressive heating of the semiconductive polymers.

The very low thermal inertia of the radiant element allows for fast regulating of the system. It is possible to apply the heating element using a plaster, tile or drywall panel finish.

It is excellent in cases of irregular or sporadic management, as an addition in bathrooms and as an anti-fogging heating element for mirrors.

During the FuoriSalone, the PAD INVISIBLE KIT will be presented in 2 versions: in one case, an ideal KIT for new dwellings and large renovations, containing elements already cabled and ready to be installed on the wall after having insulated the wall; in the other case, a RE-KIT, specifically for substitution, integration and small renovation jobs, where the components are supplied with the insulating element and the rough finish already completed, ready to be fixed to the wall and connected to the electrical system easily and quickly. Both Kits will be presented in packages including a template for wall-installation, with the holes pre-marked for additional elements like towel/bathrobe hooks or towel racks.

RBM MORE designs what is not seen: the comfort of the setting, because even the harmony of the spaces is an essential component of the quality of life. In the Via Solferino 15 showroom, all the climatic well-being solutions are integrated into every setting, becoming essential parts of the flow of the area: the PAD INVISIBLE KIT will also be installed as a framed element or hidden in the architecture, in order to best understand its real functioning and all the advantages it entails.

**RBM MORE SHOWROOM**

*Via Solferino 15, Milan*

*6-12.06.2022*

*10:00 a.m. – 8:00 p.m.*
